

InfoBurst® – The Business Intelligence Report Distribution and Publishing Solution

InfoBurst® is a comprehensive and powerful solution for scheduling, bursting, and distributing reports to extend the reach and effectiveness of your business intelligence deployment.

BusinessObjects, Web Intelligence, Crystal, Microsoft Reporting Services, and other documents can be scheduled, refreshed, logically burst, transformed into a variety of formats, then distributed and published to servers and users anywhere.

Doc #	Document Instance	Options
1	WebSales Per Region-Webi Sales Per Region-Webi	Refresh: <input checked="" type="checkbox"/>
2	Public/Crystal00/Product Catalog Product Catalog	Refresh: <input checked="" type="checkbox"/>
3	Public/BusObj/S/Sales Global Sales Global	Refresh: <input checked="" type="checkbox"/>
4	MSReports/RS2/Product Detail Product Detail	Refresh: <input checked="" type="checkbox"/>

InfoBurst natively supports BusinessObjects, Web Intelligence, Crystal, and Microsoft Reporting Services reports and all can be included in a single burst.

Comprehensive Report Distribution

- Each document has unlimited separate distribution options
- Full support of BusinessObjects (5.x, 6.x, XI R2, XI 3.1), Web Intelligence (6.x, XI R1/R2, XI 3.1), Crystal (9, 10, XI R1/R2, 2008), Microsoft Reporting Services (1.x)
- Bursts may contain other documents for distribution - Text, HTML, Excel, PDF, PPT, Word, Flash (SWF)
- Choice of destinations - Network Share, E-mail, FTP, InfoBurst Server, WebDAV Share, BO Repository, PDA
- Choice of formats for distribution - Native, Excel, PDF, HTML, Text, CSV, XML
- Additional formatting macros may be applied to Excel automatically prior to distribution
- Extensive e-mail distribution capabilities, including in-line e-mails, zipped attachments, support of LDAP, conditional distribution
- E-mail notification with embedded hyperlink when publishing to server or network

Intelligent Report Distribution

- True Report Bursting: single refresh, split logically, conditional distribution for all report types
- Unique "burst" concept to group and control all reports
- Dynamic parameter value selection (may be based on SQL query)
- Dynamic and conditional report recipient selection (LDAP script or SQL query against user table)
- In-line e-mail or attachments (zipped or unzipped)
- Report tabs may be independently handled
- Report subscription option

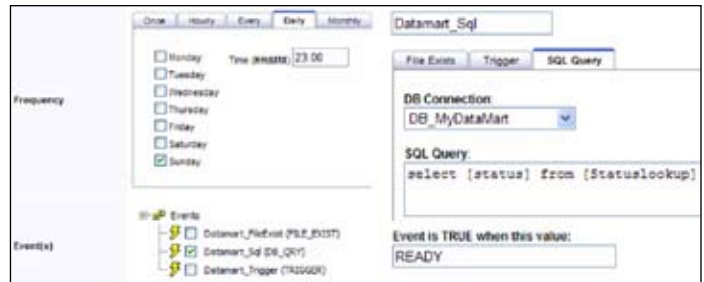

InfoBurst provides the widest range of destinations, formats, and types of reports with options to meet every need.

As a BI Enterprise Publishing Solution InfoBurst is in a League of its Own

Versatile Report Scheduling

- Extensive Time/Date dependencies
- Support of external calendars
- Event trigger dependencies (File Exist, Trigger, and SQL Query statement)
- Support of other enterprise schedulers through command line mode

InfoBurst has its own built-in scheduler, as well as the ability to work with external schedulers. As well as time dependency scheduling InfoBurst also supports flexible event driven scheduling.

Secure Report Delivery

- Secure FTP support
- Encrypted E-mail support
- Extensive activity and delivery logs

- Automated e-mail notification upon failure
- Audit log to see who did what, when (for SOX compliance)
- Performance Monitoring Dashboard
