

What's new in Xcelsius SP3?

Presenter: Abhi Singh

- ▶ **New Components**
- ▶ **Enhancements**
- ▶ **Performance and Stability**

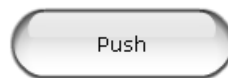

▶ Scorecard

- Enhanced grid with icon alerting and sorting

Business Unit	Actual Rev.	Target Rev.
Consulting	 150000	250000
Product Development	 130500	90000
Sales	 300000	320000

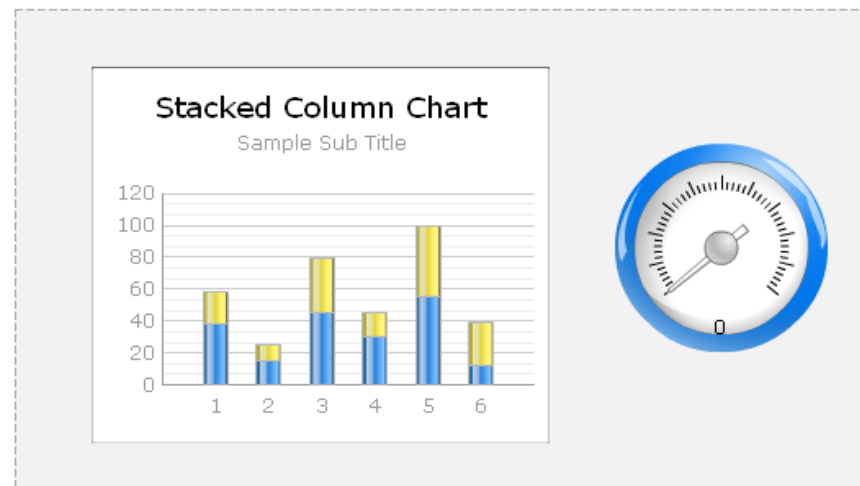

▶ Push Button

- Used to drop a range of data

▶ Canvas Container

- Canvas with no background
- Alternative to grouping.

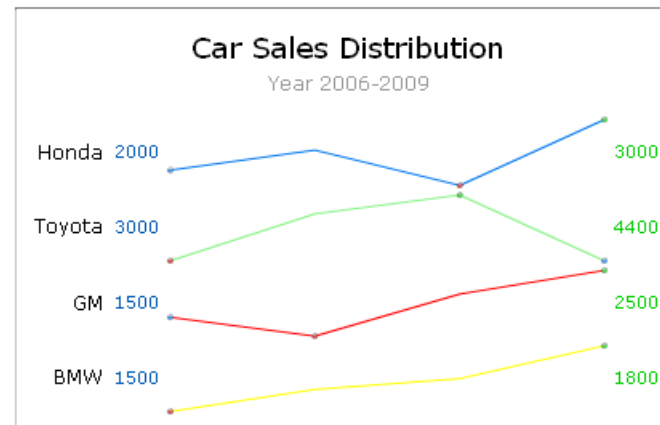

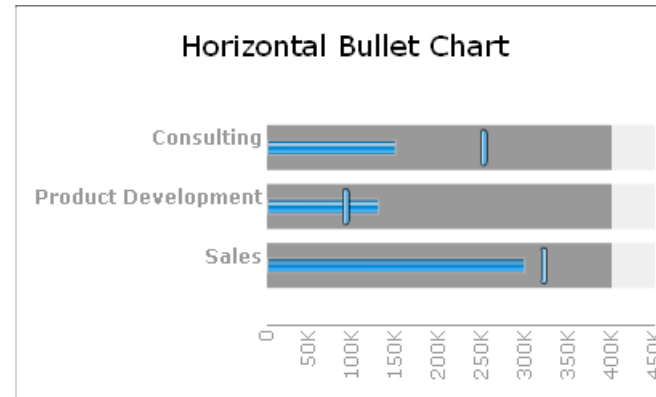

▶ Bullet Charts

- Alternative to gauge
- Require less real estate

▶ Sparkline Chart

- Used to do trend analysis.

Selector Enhancements

▶ Simultaneous multiple insertions

- Can be used for a variety of insertion types
- All fire at the same time and on the same event
- **Cannot** use multiple insertion with Filtered rows.

▶ No selection option

Charting Enhancements

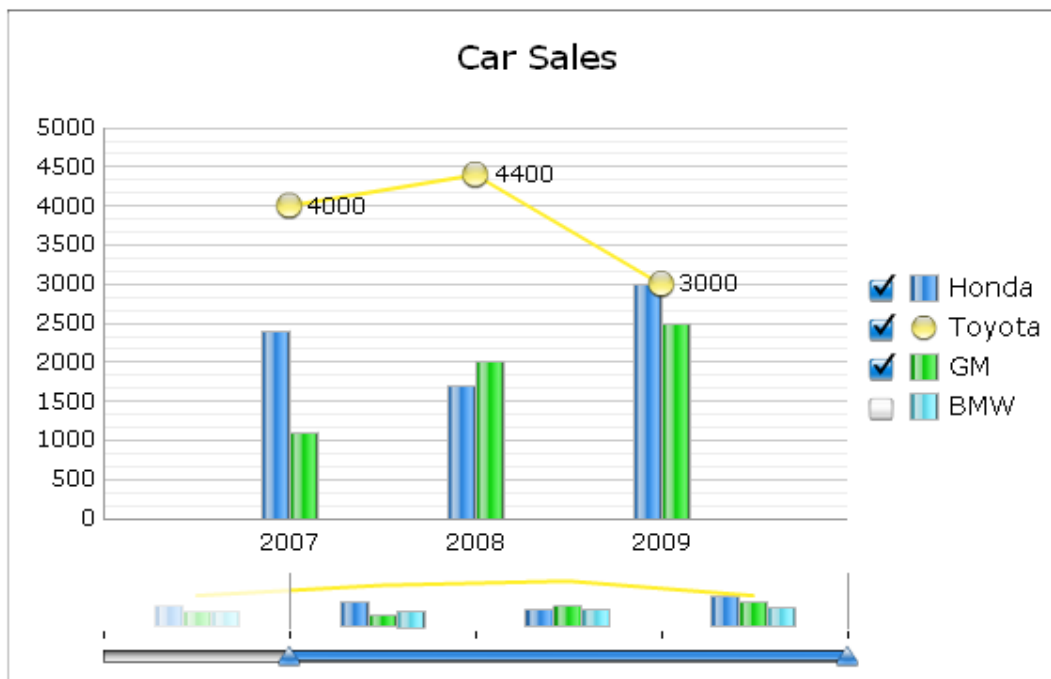

▶ Labels on charts

▶ Data Sorting

- Sorting at design time
- Very helpful if you don't have pre-sorted data

▶ More dynamic charts

- Chart range slider
- Dynamic Series Selection

Single Value Enhancements

▶ Multiple indicators on gauge

- More than one indicator on the gauge
- Needle, outside marker, inside marker

▶ Disable Input

- It allows a single value component visualization to act as a non-changeable display component.

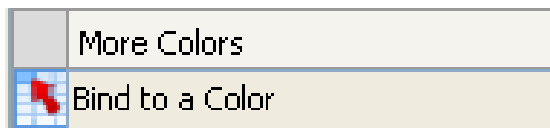

Other Enhancements

► Dynamic color binding

- Can use hex, RGB, VGA and decimal color coding schemes.

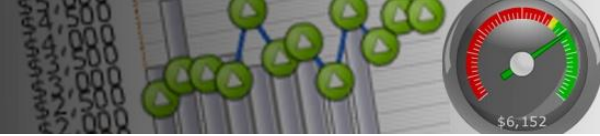

► Automatically resize value and spinner component

► Default scenario option

- Allow users to create and load a local default scenario
- Valid only for the scenarios on the computer where they are defined

- ▶ Open/Save, Import/Export - fewer crashes and data binding loss.
- ▶ SWF generation - able to generate larger SWF model with better memory management.
- ▶ Excel "Lock" issue – resolved.
- ▶ SP3 is faster in SWF gen time and in SWF init time.
