Implement and manage your security using a dynamic matrix.

## Save time managing your XI security so you can spend more time on Business Intelligence:

- ▲ Manage and use your own security profiles.
- ▲ Define users and groups in Excel and import into the CMS using 360View.
- ▲ Visualize and manage universe overloads. Identify dormant user accounts, purge inboxes and lost user sessions.
- ▲ Have a 360-degree accurate view of your deployed security: user centric and object centric.

**Rights Update**

Predefined Access Level :  
Full Control

Your Profiles :  
VIEW-REFRESH

## Why choose 360View?

**360View provides a simple, graphical interface for daily security and user management of complex BO XI deployments and enables you to see the “Big Picture” for your security configuration.**

If you miss the old BusinessObjects Supervisor, 360View includes its most useful features and a lot more.

**360View is designed for administrators, local administrators, key users and auditors.**

Try the trial version and see how simple it is to manage your BO XI security using 360View in your own environment.

## Document and control all your security and be SOX and license compliant:

- ▲ Implement and manage your groups, users, folders, objects, universes, categories and servers within a hierarchical perspective.
- ▲ Audit and document your deployed security by exporting to Excel.
- ▲ Add additional custom fields to users and objects.
- ▲ Complete visualization of the security applied on sensitive data or within SOX or BASEL environments for administrators and key users.
- ▲ Count your deployed licenses in a click.
